# Study Notes: Software Requirements Specification (SRS) for Online Music Application

## Key Concepts and Definitions

**Software Requirements Specification (SRS)**: a document that describes the requirements of a software system

**Online Music Application**: a digital platform that enables users to stream, download, organize, and share music over the internet

**Streaming**: playing music online without downloading

**Playlist**: a collection of songs created by a user

**Premium User**: a paid user with additional features

**Offline Mode**: listening to downloaded songs without internet

**Recommendation Engine**: a system that suggests songs based on user listening history

## Main Arguments

The Online Music Application aims to provide users with easy access to a wide collection of music with minimal effort

The application enables users to stream songs, create playlists, and get recommendations, while administrators manage content and subscriptions efficiently

The application provides a user-friendly interface, personalized recommendations, playlist creation, offline listening, and social sharing options

## Important Findings

The Online Music Application provides centralized access to music and reduces dependency on offline storage

The application offers time-saving, increased efficiency, easy accessibility, organized music content, and reduced storage usage

The application leverages cloud storage and advanced algorithms to ensure seamless access, high-quality audio streaming, and tailored user experiences

## System Interfaces and Features

**User Interface**: graphical user interface for users to browse music easily, including login and registration, home with music recommendations, search and playlist screens

**Functions available to Users**:

Account Maintenance

Music Streaming

Playlist Management

Song Search

Offline Downloads (Premium)

Like and Share Music

**Functions available to Artists**:

Upload Songs

Manage Albums

## Questions for Review

What is the main purpose of the Online Music Application?

What are the key features of the Online Music Application?

How does the application provide personalized recommendations to users?

What are the benefits of using the Online Music Application?

How does the application ensure security and protect user data?

How does the application ensure security and protect user data?
